### **DETAILED ACTION**

The Amendment filed 1/06/05 has been considered in preparing this Office action. Applicant's amendments to the claims and the Remarks/Arguments have overcome the rejections recited in the prior Office action mail 10/18/04.

#### ***Drawings***

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "414" has been used to designate both "the converted video data 414" supplied to the RAMDAC 440 and "the synchronizing data 414" extracted from the reconstructed display information (see Fig. 2 and the last paragraph of page 2 of the Amendment filed 6/26/03). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

#### ***Allowable Subject Matter***

2. Claims 1, 2, 4, 5, and 11-34 are allowed; and are renumbered as 1-28.
3. The following is an examiner's statement of reasons for allowance:

The present invention is directed to a flat panel display apparatus capable of providing a synchronizing signal and an analog video signal for driving an analog display apparatus. Each amended independent claims 1 and 2 identifies the uniquely distinct features: “a receiver (410) for receiving and reconstructing said display information”, “a synchronizing signal generator (430)... for generating a synchronizing signal by extracting the synchronizing data from said reconstructed display information”, and “an output terminal (450) connected to said synchronizing signal generator (430) and to said DAC (440) for transferring said synchronizing signal and said corresponding analog video signal to an analog display apparatus” (see figure 2). The closest prior art, Berry (U.S. Patent No. 5,150,109), McNally (U.S. Patent No. 5,608,418) and Fujimoto (U.S. Patent No. 5,479,183) disclose conventional plural display systems interfaces, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Further, in the Remarks/Arguments, see pages 10-14 of the above-identified Amendment, applicants have clearly pointed out the patentable novelty features and the differences between the amended claimed invention and the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. They are U.S. Patents Nos.: 5,670,969 (Yamagami et al) and U.S. Patent No. 5,430,457 (Itoh et al), which teach plural display systems.
